

# Nuclear Waste from San Onofre Where to we go from here?

## Presentation by Ray Lutz

Introduced by Dr. Tom English

The CA Coastal Commission approved a permit to build a nuclear waste storage facility at San Onofre only 100 ft from the fragile ocean, inches over the high-water mark, and near a 7.4 mag fault. This location puts the coastline at risk of radioactive contamination. Citizens' Oversight filed a lawsuit and now we are in settlement negotiations. Ray will describe this situation and status of the lawsuit. Despite the serious nature of this talk, attendees report it is quite humorous. Don't miss it!

Ray Lutz, trained as an engineer in electronics and software, founded Citizens Oversight in 2007 to enable civic engagement. Most recently, he has been active in the San Onofre nuclear plant shutdown, nuclear spent fuel, and \$3.3 billion bailout negotiations, and has also been improving election integrity using the Snapshot Protocol and intense oversight of election processing. Worked with the community to stop Blackwater expansion in San Diego East County, and in 2011, was arrested for attempting to register voters.

His website is [citizenoversight.org](http://citizenoversight.org).

## Our Changing Climate Series

# Thursday, June 8th

## 5:30 - 7:30 pm

*Presented in conjunction with the North County Climate Change Alliance*

Vista Branch • 700 Eucalyptus Ave. / Vista, CA 92084 • (760) 643-5100
